Program Information

Healthy Lifestyles (4 week series)

Healthy Lifestyles is designed to:

- help better manage your weight,
- reduce the risk of illness or injury,
- lead you in the right direction for the healthier lifestyle you've been seeking.

Healthy Lifestyles is not a guaranteed "quick-fix" to lose weight. A long term commitment is needed in order to be successful in changing your lifestyle. Healthy Lifestyles is designed to give you the power you need to make significant lifestyle changes.

Healthy Lifestyles for Life (first Tues of each month)

Healthy Lifestyles for Life is a monthly program designed for participants who have already completed Healthy Lifestyles. HLLFL meets the first week of each month and offers a topic of the month, recipes, demos, and ongoing support and accountability.

Diabetes Education(4 week series)

Diabetes education is designed to:

- teach diabetics how to monitor their condition,
- improve their diet,
- manage stress to more effectively control their diabetes.

The Diabetes Education program offers information to make change easier and allow persons with diabetes to achieve and maintain better day-to-day health.

Healthy Heart (4 week series)

Healthy Heart is designed to help participants:

- be able to monitor their heart condition,
- know how to use medications effectively,
- identify warning signs of a heart attack or stroke,
- know how to reduce cholesterol, sodium and fat intakes,
- learn how to make changes in meal preparation
- be able to make informed healthy choices at grocery stores and restaurants.

Many of the risk factors for coronary heart disease are controllable. Risk factors include high blood pressure, high cholesterol, smoking, obesity, lack of physical activity, diabetes and stress. Join us and learn how to control your risks.
